Who We Are

Our journey began in 2020. We envisioned bridging the gap between manufacturers and retail pharmacies. Our commitment to quality healthcare solutions and prompt distribution services has made us a reliable partner in the industry. We prioritize customer satisfaction, offering competitive pricing on generic pharmaceutical supplies while exclusively serving licensed and certified pharmacies. Through strategic partnerships and a dedication to excellence, we've earned the trust of pharmacies across the region, showcasing our resilience, adaptability, and unwavering dedication to serving the healthcare community.

Our Vision

“Our vision is to transform the pharmaceutical industry by pioneering the delivery of affordable, high-quality generic medicines and by providing exceptional and rapid service to retailers. Through our dedication, we aim to drive effective results and significantly enhance health outcomes for end consumers.”

Our Mission

“Our mission is to supply pharmacies, healthcare facilities, and distributors with a comprehensive range of cost-effective generic medications, ensuring reliability, affordability, and patient well-being.”

MYTH:

Once I feel better, I can stop taking my meds.

FACT:

Some medications, like antibiotics, need to be taken for a predetermined period of time to have their full effect. Some conditions are "silent" and how you feel may not be the best way to determine if you still need treatment.

MYTH:

Generic medications are less effective.

FACT:

Generic drug manufacturers submit a number of tests to support that the generic product will behave in your body the same as the brand equivalent. They may have a slightly different look or color—and a different price—than brand name medications, but the action they have on the body is the same.

MYTH:

Over-the-counter drugs (like cold or headache meds) don't interfere with prescription medications.

FACT:

Non-prescription drugs and herbal remedies can cause side effects and also have the potential to interact negatively with prescription medications. Check with a MOBE Pharmacist before adding new products to your routine.

**Did You Know This
– About –
Babies?**

Babies can remember the songs they hear on repeat while inside the womb.

75% of nutrients in a baby's meals go to the brain's development in the first two years.

A baby's vision can only detect black, white, and shades of gray at birth.

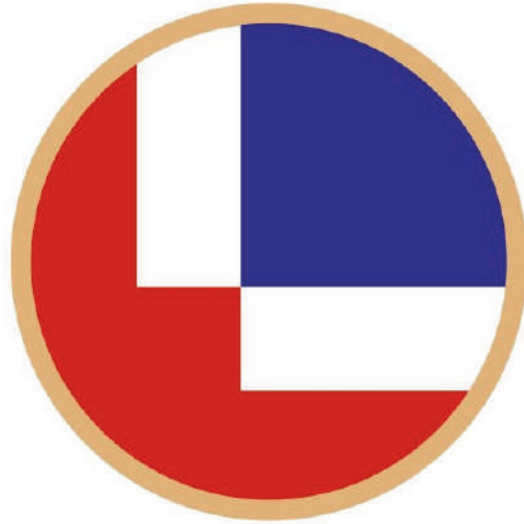

Unlike adults, babies have 300 bones, some of which fuse and become one to make 206 bones.

Babies are heavy sleepers and may sleep for 14-20 hours daily in the first few weeks.

Babies breathe much faster than adults, with 40-60 breaths per minute while awake.

FAST FACTS ABOUT MEDICINE

FACTS

MYTHS

If you don't get into medical school straight after college this will reflect badly on you.

Once you become a clinician, you will be stuck in this role.

Excellent graduate prospects for students. They find employment within 6 months of leaving.

If students take a lot of classes per term and don't do as well, medical schools will take this into account.

Study time is 9,000 hours (that's more than a year!)

All nurses are women.

Medical careers are fairly well remunerated. In the UK, for instance, the basic starting salary for foundation year 1 doctors is UK£22,636, rising to UK£28,076 in foundation year 2.

Seven of the 10 best-paying jobs are in the healthcare industry and require completion of a secondary degree.

**BRAIN-BOOSTING HOBBIES
SCIENTIFICALLY
PROVEN**
to help you win at life

Your brain is the command center of your body. From your feelings to behaviors, it dictates everything you do. Just like any other muscle, it's important to stimulate and strengthen your brain. But how do you train your brain to be stronger? Below are eight common hobbies scientifically proven to boost your brain's health.

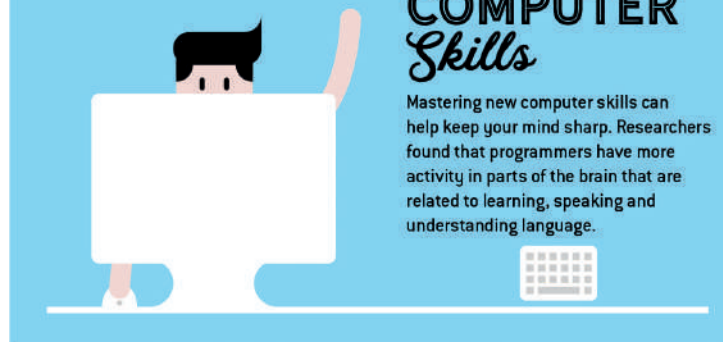

**SPORTS
& Fitness**

Breaking a sweat can improve your ability to multitask and boost productivity. On average, employees who exercise regularly are 15% more efficient and 23% more productive.

**COMPUTER
Skills**

Mastering new computer skills can help keep your mind sharp. Researchers found that programmers have more activity in parts of the brain that are related to learning, speaking and understanding language.

**YOGA
& Meditation**

Centering your chi greatly reduces stress and fights off anxiety. In a study, 60% of anxiety-prone participants showed improvement after 6-9 months of meditation.

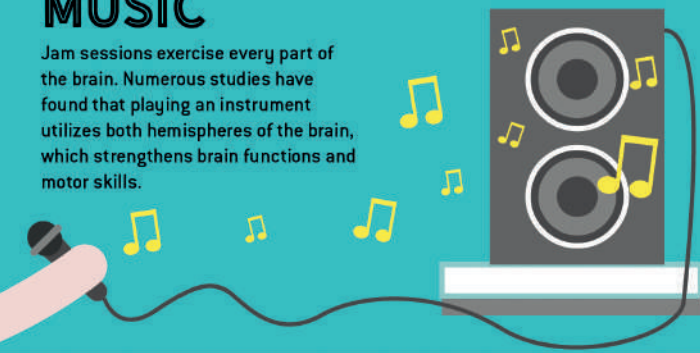

COOKING & Baking

Whipping up a tasty meal improves your ability to multitask. Multiple studies have shown that multitasking sparks brain activity and enhances neural efficiency.

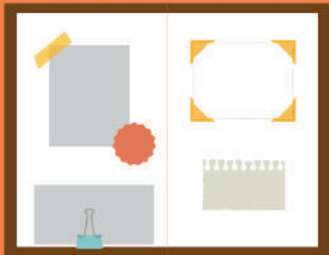

MUSIC

Jam sessions exercise every part of the brain. Numerous studies have found that playing an instrument utilizes both hemispheres of the brain, which strengthens brain functions and motor skills.

CRAFTS

Did you know that knitting and scrapbooking actually benefit your brain? Crafting may reduce your chances of developing mild cognitive impairment by 30-50%.

LANGUAGE

Learning a foreign language helps you stay mentally fit. Research has shown that bilinguals show Alzheimer's symptoms 5 to 6 years later than those who speak only one language.

Traumatic Brain Injury (TBI): Pediatric Causes and Prevention Strategies

TBI is an injury caused by a blow, jolt,
or penetrating object that disrupts
normal functioning of the brain.

CDC reports that more than **2.8 million** U.S.
people sustain a TBI each year; of those,
more than **65,000** die and more than **280,000**
are hospitalized.¹

TBI can be **mild to severe**.

Severe TBI can lead to permanent disability
and even death.

75% of brain injuries are mild (not
life-threatening). Concussion
is a type of mild TBI.²

All types of TBI can seriously affect a child's daily life.

Brain injury can cause problems with speaking or understanding, movement or mobility, thinking
or memory, and personality or mood.

Causes

The **leading causes** of TBI in the United States are¹

Falls

About half
of brain injuries in
children are caused by
falls from objects like
stairs and bicycles.

**Unintentional
blunt trauma**

28%
of brain injuries in
children are caused by
being hit in the head
with an object, like a
baseball or soccer ball.

**Motor vehicle
crashes**

Car accidents are the
#1 cause of TBI-related
death in children older
than age 5.

Homicide

Homicide is the #1
cause of TBI-related
death in children age 4
and younger.

Prevention Strategies

Take the following actions to **reduce the risk of TBI in children**.

Use a child safety
seat or a seat belt
when the child is
in a motor vehicle.

Make sure the child
wears a helmet when
riding a bicycle,
skateboarding, and
playing sports like
hockey and football.

Install window guards
and stair safety gates
at home.

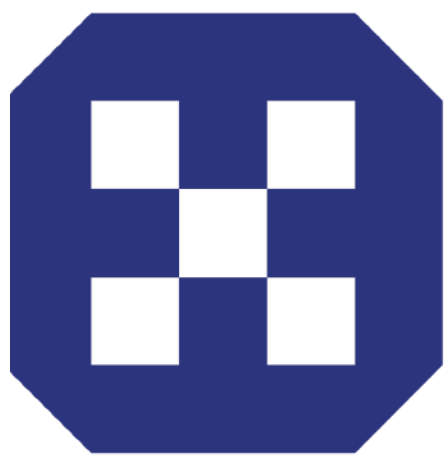

Avoid shaking your
baby. Learn how
to prevent shaken
baby syndrome.³

+ 5 Facts About Our Organs +

+ 5 Fascinating

We share 98.4% of our DNA with a chimp and 70% with a slug.

Like fingerprints, every person has a unique tongue print.

The human head remains conscious for about 15 to 20 seconds after it has been decapitated.

The brain doesn't feel pain; even though the brain processes pain signals, the brain itself does not actually feel pain.

One person in 20 has an extra rib, and they are most often men.

A person will die from lack of sleep sooner than they will from starvation, which usually takes a few weeks.

You are taller in the morning; throughout the day, the cartilage between your bones is compressed, making you about 1 cm shorter by day's end.

More germs are transferred shaking hands than kissing.

+ Best Foods To Help

Oatmeal

- One of the high levels of tryptophan and B vitamins!

Bananas

- Contain potassium and magnesium, which allow your muscles to relax
- Bananas are also rich in the amino acid tryptophan, signaling your body to produce serotonin, helping you to feel more relaxed and ready for bed.

Walnuts

- Source of melatonin, it's also rich in heart-healthy omega-3 fatty acids.

Yogurt

- Healthy source of tryptophan
- Tryptophan produces serotonin to help with sleep and appetite

Kale

- Source of Vitamin B6 which helps our bodies produce more serotonin and melatonin

Kiwi

- High source of serotonin. Serotonin help combine with melatonin helps regulate sleep cycles

You Sleep Better +

Cherries

- A recent study found that drinking tart cherry juice can raise one's melatonin levels and lead to better sleep efficiency and improved sleep quality overall.

Cottage Cheese

- Includes Casein, which the body digest slower leaving people feeling fuller longer

Pistachios

- Rich in melatonin, vitamin B6, and magnesium – all of which are essential foods for better, deeper sleep.

Popcorn

- High in carbs, Carbs make tryptophan which is an amino acid important for sleep

Spinach

- Spinach is rich in tryptophan, folate, magnesium, and vitamin B

Figs

- Rich in potassium and magnesium along with calcium and iron
- Encourage blood flow and keep your muscles from contracting – making it easier for you to fall asleep.

The fascinating brain 5 amazing facts

1 Malleable at will

It has long been thought that the brain is an immutable, static organ. We now know that by creating, undoing or reorganizing neural networks, it adapts according to our experiences.

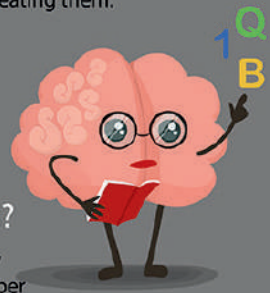

2 Grows by removing connections

This is one of the mechanisms of neuroplasticity: when a connection is ineffective or unused, it is removed. For the brain to develop normally, removing connections is as important as creating them.

3 Mixed senses: the fault of the neurons?

Have you always and unintentionally associated a particular letter or number with a certain color? Researchers believe that this condition called "synesthesia" may be because connections, that should have been destroyed early in life, have continued.

Adolescence: major remodeling 4

In adolescence, the nerve transmissions of the brain are multiplied, its connections are reinforced, and it becomes globally more complex and efficient. However, it is only 80% developed, and it is only by reaching the age of 25 or even 30 that it reaches its maturity.

5 No new neurons in adulthood?

This was the conclusion of a recent study by the University of California, San Francisco (UCSF) when it was believed to be the opposite since the 1960s. It will, therefore, be necessary to revisit this question.

A few numbers

3
months

At this age, the brain has reached half its size of the one of an adult.

10 to 25
watts

That's what the brain generates every hour ... and that's enough to keep a light bulb burning!

1
MB
of information

This is what our eyes receive every second and transfer to the brain. This is equivalent to reading every minute an encyclopedia.

SKIN FUN FACTS DID YOU KNOW..?

Your skin is your largest organ and plays a vital role in detecting hot and cold, regulating your body temperature and protecting your muscles, bones and internal organs from outside infection and disease. But that's just for starters. There is so much more to your skin than you might think. Here are some of the most interesting facts about your skin:

The average person's skin covers an area of **2 square meters.**

Skin accounts for about 15% of your body **weight.**

The average person has about **300 million** skin cells. A single square inch of skin has about **19 million** cells

and up to **300** sweat glands.

The average adult has approximately 21 square feet of skin, which weighs

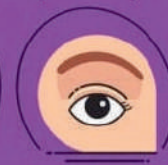

9 lbs

and contains more than **11 miles** of blood vessels.

11M

Your skin is its thickest on your feet (1.4mm).

Thinnest on your eyelids (0.2mm).

The skin renews itself every

28 days.

Some sources estimate that more than half of the dust in your home is actually dead skin.

Dead skin comprises about a **billion tons** of dust in the earth's atmosphere.

Your skin constantly sheds dead cells, about 30,000 to 40,000 cells every minute! That's nearly **9 lbs.** per year!

SWAP OUT

Soft drink or cola

SWAP IN

Fizzy water with
a mint leaf and
cucumber, or a
glass of water
with ice cubes
made from fruit

This reduces
your sugar and
kilojoule intake,
and the risk of
tooth decay and
diabetes.

SWAP OUT

Fruit juice

SWAP IN

One piece of
fruit

If you only have
fruit juice, you'll
miss out on
dietary fibre.

STABILITY TESTING

NAVIGATING THE CHALLENGES

24,000

Number of syringes of Amidate recalled by Hospira in October 2018

Vaccine types recalled by Daiichi Sankyo at the same time

2

There were no reports of safety concerns. However, testing confirmed degraded product/reduced potencies. Both incidents came with heavy financial cost.

WHAT DOES STABILITY TESTING DO?

Perform functions like:

Establish Retest Dates

Aid Drug Product Formulation

Aid Process Selection

Influence Packing, Shipping Storage

Test how external factors influence drug product or substance

Temperature

Humidity

Light

DRUG SUBSTANCE VS DRUG PRODUCT

Drug Substance

Actual active pharmaceutical ingredient (API)

Drug Product

API + Excipients = Finished dosage form e.g capsule, tablet

Both undergo similar but not identical tests.

NON BINDING FDA GUIDANCE

- Stress testing
- Batch Selection
- Container Closure System
- Specifications for Analysis
- Frequency
- Storage Conditions
- Stability Commitment
- Evaluation
- Statements/Labeling

There are many areas of guidance, but no clarity what non-binding means.

SEVEN AMAZING FACTS

about
MEDICAL MARIJUANA
and
YOUR HEALTH

1 Our bodies make endocannabinoids, natural versions of the active ingredients found in cannabis, to help manage stress.

2 Some cannabis strains are bred to be non-psychoactive.

3 Teen cannabis use holds steady—or falls—after states legalize medical marijuana.

4 Marijuana can ease opioid withdrawal and reduce drug cravings.

5 Cannabis contains over 100 different cannabinoids.

6 Adult medical marijuana users show no signs of cognitive decline.

7 Smoking cannabis doesn't increase the risk of lung cancer.

EAR INFECTIONS By the Numbers

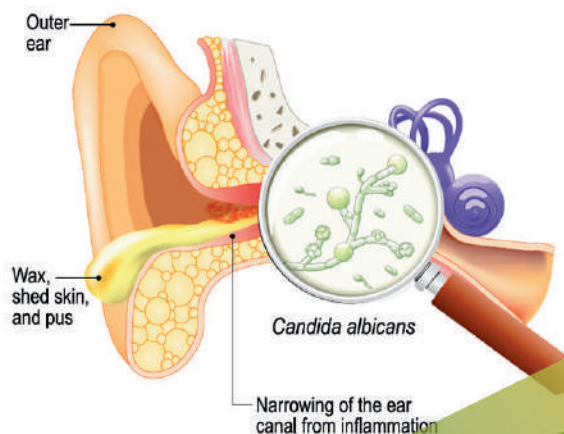

For acute middle ear infections, antibiotic therapy should be started within **48 TO 72 HOURS.**

Ear infections need to be closely followed, especially in children ages **6 MONTHS TO 2 YEARS.**

Some children may have **FIVE OR SIX** middle ear infections a year.

Tubes stay in place for **SIX TO NINE** months.

Doctors will prescribe antibiotics, such as amoxicillin, to be taken for **SEVEN TO 10 DAYS.**

Antibiotic Resistance

It's when bacteria **change and cause antibiotics to fail** It is happening worldwide.

The full impact is unknown

There is **no system** in place to track antibiotic resistance globally.

Many modern medicines could become obsolete without urgent action, turning common infections **into deadly threats**.

A Growing Crisis Worldwide

In **Thailand**

> **38,000+ deaths**

per year and 3.2m hospital days

In the **European Union**

> **23,000+ deaths**

per year and >2.5m extra hospital days

In **USA**

> **23,000+ deaths**

per year and >2.2m illnesses

In **India**, over

> **58,000 babies died**

in one year as a result of infection with resistant bacteria usually passed on from their mothers

Causes of Antibiotic Resistance

-  Over prescribing antibiotics
-  Patients not taking them as prescribed
-  Unnecessary antibiotics used
-  Lack of rapid laboratory test
-  Poor hygiene and sanitation practices
-  Poor infection control in clinics

How Can We Stop it?

-  **Improving Labs**
Countries need medical labs to identify bacteria and choose the right drugs to treat them.
-  **Use Antibiotics Wisely**
To ensure antibiotics are here when we need them, they must be prescribed and taken correctly.
-  **Collect and Share Data**
Countries need systems to track cases and report results globally to make better policy decisions.
-  **Take Measures**
Especially in healthcare settings, good infection control practices are critical to stopping the spread of resistant germs.

TAKE CARE OF YOUR MENTAL HEALTH

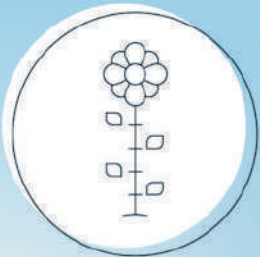

Overall health =
physical health +
mental health +
social health.

Let's look after
our mental health!

Our mental health
evolves throughout
our lifetime.

Our mental health is
affected by the people
around us and our
experiences, inner
resources, socio-economic
environment, sleep, diet,
exercise and genes.

Don't be afraid to
ask for help or
seek support.

SIX TIPS TO REDUCE YOUR RISK OF DIABETES

1. Manage your weight

Excess weight, **particularly in the abdominal area**, increases the risk of developing diabetes.

If you are obese or overweight, **losing weight may significantly reduce the risk of diabetes.**

2. Increase your physical activity

Regular physical activity – **aerobic exercise** and **strength training** – helps manage weight and improve heart health. Some studies show exercise can boost your sensitivity to insulin.

3. Follow a balanced, healthy diet

A **balanced diet** helps maintain a healthy weight and prevent diabetes. Reduce sugary foods, refined carbs and trans-fats in your diet.

Limit processed or fried foods and sugar-sweetened drinks and cereals. Eat more vegetables, fatty fish, whole grains and high-fiber foods.

4. Limit your alcohol intake

High alcohol consumption can lead to **weight gain**. Some studies also show drinking large amounts of alcohol can make your body **less sensitive to insulin**.

5. Quit smoking

Smoking causes or contributes to **many serious health conditions**, including diabetes.

Smoking can contribute to insulin resistance; **if you smoke, try to quit.**

6. Get regular medical check-ups

Talk to your healthcare provider to discuss how to delay or prevent diabetes. **Regularly check** your blood glucose, and if you have any risk factors also check your **Haemoglobin A1c** (a test that measures the sugar attached to your red blood cells) and insulin levels.

WATER FACTS OF LIFE

RIDE THE WATER CYCLE

with these fun facts

There is the same amount of water on earth as there was when the earth was formed.

The water from your faucet could contain molecules that dinosaurs drank.

That leaves just about 1% of the world's water for all of humanity's needs.

Nearly 97% of the world's water is undrinkable. 2% is locked in ice caps and glaciers.

Water composes of two elements. 2 parts hydrogen and 1 part oxygen = H₂O.

A person can live about a month without food, but only about a week without water.

75% of the human brain is water.
75% of a living tree is water.

Water regulates the temperature of the human body and also earth's temperature.

Here are 4 Simple Ways to Relieve Stress

01. Have healthy choices/behaviors

Moving your body, getting the recommended hours of sleep or eating a healthy & consistent diet.

02.

Practice mindfulness

Start each day with happy thoughts and gratitude. Focus on the present.

03. Build a support network

Surround yourself with positive and happy people. Share your life experiences and moments with them. Seek professional help.

04.

Have a self-care routine

A regular self-care routine is key to a healthy and confident mindset.

You and Immunity

Bacteria and Viruses

These are the intruders — **antigens** — that get into your body and try to make you sick.

Your immune system recognizes these intruders and produces special proteins called **antibodies** that can lock onto and destroy the antigens.

Helping the Herd

Vaccines protect individuals...and entire populations.

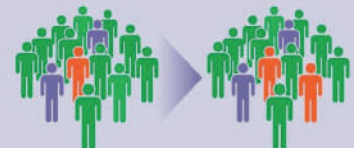

Take the highly infectious measles virus, for example...

If only a few people get vaccinated...

...measles can spread to up to 90% of the population.

If 92% to 94% of the population gets vaccinated against measles...

...the virus has nowhere to go and will not spread to the unprotected 6% to 8%.

■ Healthy, non-vaccinated ■ Healthy, vaccinated ■ Non-vaccinated, sick, contagious

Trick and Teach

Vaccines use **dead or weakened antigens**, or parts of them like proteins, to trick your immune system into thinking there's an intruder in your body. As a result, your immune system creates **antibodies** to fight the antigen. Once your body knows how to make these antibodies, it stores the assembly instructions in "**memory cells**," and destroys the rest of the antigens present. If the antigen ever makes its way back into your body, your immune system will know how to assemble the antibodies to destroy the intruder quickly.

Vaccine Variance

Here are five common types of vaccines and how they work.

Type	How It Triggers Immune Response	Example
mRNA	Uses messenger ribonucleic acid (mRNA) to cause cells to make a protein or a piece of a protein to mimic the antigen.	COVID-19 vaccine
Live-Attenuated	Uses a weakened form of the antigen that causes disease.	Chickenpox vaccine
Inactivated	Uses a dead form of the antigen that causes disease.	Flu vaccine
Subunit, Recombinant, Polysaccharide and Conjugate	Use a specific piece of the antigen, like a protein, sugar or casing around it.	Shingles vaccine
Toxoid	Uses a toxin made by the antigen that causes a disease.	Tetanus vaccine

LIFE CYCLE OF A LOUSE

EGGS

Head lice eggs (called "nits") are hard to see and often confused for dandruff or hair spray droplets. Nits can be found at the base of the hair shaft nearest the scalp.

NYPHPS

The egg hatches to release a nymph. The nit shell then becomes a more visible dull yellow and remains attached to the hair. Nymphs mature after three molts and become adults about seven days after hatching.

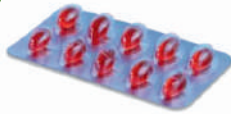

ADULTS

The adult louse has six legs, each with a claw, and is tan to grayish-white. Adults multiply quickly, laying up to eight eggs a day, and living up to 30 days on someone's head. A louse can go two days without blood meals.

Difference between a

SORE THROAT AND STREP THROAT

Though sore throat is more commonly seen among people, strep throat is more dangerous. Some of the warning signs are discussed below.

Sore Throat

Definition

A sore throat is caused by a viral infection or can be a side effect of allergies. **ENT doctors** say that it can be treated easily with medicines.

Symptoms

Some of the symptoms that people can commonly get while suffering from a sore throat are difficulty swallowing, swollen red tonsil, coughing, runny nose, and swollen red throat. **ENT doctors** suggest getting checked immediately after feeling any of such symptoms.

Diagnosis

ENT doctors do a virtual throat exam.

Treatment

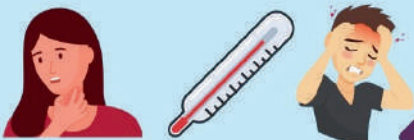

Doctors give fluids, over-the-counter medicines, and rest.

Length of contagion

It stays for 5 to 7 days from when the symptoms start.

Strep Throat

Symptoms

Some common symptoms are red, swollen tonsils, neck rash, difficulty swallowing, pus accumulated in the throat, fever, headache, and swollen lymph nodes in the head. **ENT doctors** suggest also looking for any white spots on the tongue.

Definition

Strep throat usually happens if you have a bacterial infection caused by streptococcal bacteria.

Diagnosis

ENT doctors usually do a throat culture swab to know if the patient has strep throat.

Treatment

Doctors suggest over-the-counter medication, fluids, rest, and antibiotics.

Length of contagion

Strep throat can last for a few weeks, but it gets cured within 48 hours with antibiotics.
